# 1 Purpose

This procedure covers WHS inspections of premises owned or leased by Scouts NSW eg Scout Halls, Activity Centre, Scout Camps and offices. It applies to employed staff, volunteers and other position holders. Collectively, these individuals are called “workers”.

Scouts properties will be inspected regularly to identify hazards and to take steps to eliminate or minimise these hazards. Site Managers are responsible for conducting inspections at Activity Centres and Camp Sites. Group Leaders are responsible for conducting inspections at Scout Halls.

# 2 Responsibilities

**Site Managers, Group Leaders and Region Office Managers** are responsible for conducting inspections at their respective sites. They also are responsible for initiating corrective actions to address hazards that are identified during the inspection process.

**Region Office Managers** might also be required to assist with the collection of completed checklist from the group leaders.

# 3 Facilities Requirements

Scouts NSW will ensure the following (where reasonably practicable to do so):

- the layout of the workplace allows people to enter, exit and move about the area without risk to health and safety, both under normal working conditions and in an emergency. This layout must be maintained at all times.
- that work areas have sufficient space for the required work to be carried out without risk to health and safety
- that floors and other surfaces are designed, installed and maintained to allow work to be carried out without risk to health and safety
- that the lighting enables:
  - each worker to carry out work without risk to health and safety and
  - persons to move within the workplace without risk to health and safety and
  - safe evacuation in an emergency
- ventilation enables workers to carry out work without risk to health and safety,
- workers carrying out work in extremes of heat or cold are able to carry out work without risk to health and safety,
- work in relation to or near essential services does not give rise to a risk to the health and safety of persons at the workplace.

- that toilets, drinking water, washing facilities and eating facilities are provided and maintained in good working order and be clean, safe and accessible and
- that facilities provided for workers must take into account all relevant matters such as
  - the nature of the work being carried out at the workplace
  - the nature of the hazards at the workplace
  - the size, location and nature of the workplace
  - the number and composition of the workers at the workplace.

In addition, there are a number of compliance requirements for building, which must be explored at the time of design or acquisition. For existing properties, refer to [Scouts Australia Property Procedure: Fire Safety & Amenity Code for Scout Halls \(when used for sleeping purposes\)](#) and [Property: Emergency Lighting & Exit Signage for Scout Halls](#).

## 4 Post Vacancy Checks

Each Scouts NSW Activity Centre and Scout Camp will implement a method of inspecting sleeping areas and kitchens following any guest vacating the premises. Such post-vacancy checks aim to observe tidiness, cleanliness and pick up on any immediate safety hazards or issues eg broken windows or broken furniture. Issues identified will be addressed in line with the hierarchy of controls and with the appropriate level of priority. In addition to post-vacancy checks, formal WHS inspections shall occur regularly – see the following section.

## 5 WHS Inspections

The WHS inspection is an important mechanism by which the WHS standards are established, maintained and improved. The inspection should identify and record physical hazards, errors in the work procedures or sub-standard work practices. ([P10 WHS Inspection Checklist- Scout Hall](#), [Workplace Inspection Checklist- Activity Centre](#) and [Workplace Inspection Checklist- Office](#)).

During the workplace inspection, any simple corrections can be made if safe to do so. It is recommended that users and occupants be consulted during the inspection, as they may have identified issues that have not been reported and are not apparent from the inspection. If any immediate hazards are identified which cannot be addressed during the inspection, steps should be taken to control the hazards temporarily, until the hazard can be addressed fully. All remaining actions must appear on the report for attention and any maintenance requests should be directed to the Site Manager for attention.

For State Activity Centres, the site manager will transfer all outstanding actions to the relevant [WHS Action Plan](#) to enable the monitoring of the status of the action.

For Scout Hall, the respective Group Leader (or delegate) highlight the required actions on the appropriate fields in the report and flags then for discussion at the subsequent group meetings.

## 6 Frequency of inspection

**Scout Halls** – submits the *P10 WHS Inspection Checklist- Scout Hall* report, along with any requested supporting documents such as the Fire Safety Certificate, Pest Inspection Records etc to the Region Office annually, highlighting any action required.

**Activity Centres and Scouts Camps** – Site manager, warden or delegate, to conduct inspections *quarterly*. Where time or resources are limited, it is acceptable to focus on specific items within the checklist each quarter, as long as within any given year, all items on the checklist are inspected thoroughly. These inspections are IN ADDITION to the post-vacancy checks for camp sites.

**Region Offices** – Region Office Manager to conduct inspection at minimum, *annually*.
